EDUCATION

Gokaraju Rangaraju institute of engineering and technology

Bachelor of technology in Data Science

Hyderabad

June 2024 – June 2027

Samskruti college of engineering and technology

Diploma in Computer Science

Hyderabad

Sep 2021 – April 2024

PROJECTS

Diabetes Severity Prediction using Retinal Fundus Images | Deep Learning, CNN, U-Net, ResNet50,

2026

- Developed a non-invasive AI-based system to predict diabetes severity using retinal fundus images.
- Applied image preprocessing techniques including CLAHE and Ben Graham illumination correction for retinal enhancement.
- Implemented U-Net with EfficientNet-B4 for lesion segmentation and ResNet-50 for diabetic retinopathy classification.
- Built regression models such as Lasso Regression and Random Forest for blood glucose prediction.
- Achieved 88.09% validation accuracy in diabetic retinopathy severity classification.

YouTube Video Summarization System | Python, Flask, NLTK, TF-IDF, TextRank

2025

- Developed a web-based application to generate summaries from YouTube video transcripts.
- Applied TF-IDF and TextRank techniques for efficient text summarization.
- Integrated API-based transcript extraction with a Flask backend for automated processing.

ACHIEVEMENTS

- Selected as a Finalist in the AgentX Salesforce 24-hour Hackathon conducted at Anurag University.
- Participated in the TechXcelerate Hackathon conducted at BITS Pilani focusing on innovation-driven development.

TECHNICAL SKILLS

Languages: Python, C, Java, SQL

Artificial Intelligence & Machine Learning: AI, Machine Learning, Deep Learning, CNN, Regression Models

Data Visualization: Tableau, Power BI, Matplotlib

Data Mining Concepts: Data Mining, Data Analysis

Libraries/Frameworks: NumPy, Pandas, Scikit-learn, OpenCV, TensorFlow, Keras

Tools: GitHub, Jupyter Notebook, Google Colab

Databases: MySQL

Core Concepts: Data Structures, OOPs, DBMS, Operating Systems
